1. What is Dash 2 Trade?

**Dash 2 Trade**

Dash 2 Trade is crypto analytics and social trading platform designed for traders by traders. Powered by the D2T token and community, the system provides crypto traders with in-depth market insights to enable the creation of market-beating strategies.

Dash 2 Trade allows all levels of traders to access signals, metrics and social trading tools. With the actionable insights powered by the D2T ecosystem, a trader can identify and analyze underlying factors that influence the price of cryptocurrencies.

The crypto space is made up of thousands of tokens – for example crypto data site Coinmarketcap lists 21,497 as at 25 October 2022.

Both the quantity of assets and the speed at which product development takes place, means it is challenging for an individual trader to hope to track and analyze all of these crypto assets and their various sectors. Add to that the volatility of price movements in crypto and the task of attempting to conduct adequate due diligence can be overwhelming.

In addition to the sheer number of assets in the crypto universe, there are new coins being launched literally everyday.

Crypto verification site Coinsniper estimates that there are at least 20–30 new coins listed every week. Trying to keep track of those coins, let alone taking the time to analyze each one, is almost impossible, which is where Dash 2 Trade comes in.
Dash 2 Trade Dashboard Features

On-Chain Analytics and Social Sentiment

Among the core features of the Dash 2 Trade dashboard are the social and on-chain analysis insights. This enables dashboard users to spot patterns and trends that indicate specific coins could be subject to significant price volatility. Many major market movements are dictated by socio-cultural developments in the space. Traders and other market participants are spending more of their time online and using social platforms to share their views on particular coins.

Add to this phenomena the greater weight in the marketplace of retail traders and investors, and it means that market sentiment can be discerned by analyzing the big data in both its structured and unstructured forms that emanates from the social sphere.
What's more, as well as the size of an online community being a key indicator of project success, an analysis that can determine whether sentiment is leaning positive or negative on the price outlook, can be a powerful indicator of future price action.

Using artificial intelligence to power sentiment analysis

For example, there could be an abnormally large amount of buzz – positive sentiment – that signals socio-cultural changes in a Web3 community that can be transformed into measurable and actionable signals. Dash 2 Trade has developed metrics that are able to track these micro and macro cultural trends on platforms such as Twitter and Reddit.

Through the application of artificial intelligence technology such as natural language processing, Dash 2 Trade automates the process of consuming and analyzing social metrics, to determine what is actionable from a market intelligence and asset pricing perspective for D2T token holders.
Dash 2 Trade has designed social metrics that, for example, track how active specific token discussions are, how widespread discussions are, and even how frequently the asset’s code repository is getting updates pushed to it.

**Key features:**
- Token/Project activity on social media
- Sentiment analysis of token activity
- Project developer activity

**Crypto Trading Signals & Technical Indicators**

Technical signals are typically used by day-traders to make short-term trading decisions. However, they can also be deployed by traders of all types to help them make well-informed entrances and exits on an asset across a range of timescales.
Dash 2 Trade includes commonly used technical indicators such as moving averages, bands, supports, price correlation between assets, outliers in volume, orderbook statistics on centralized exchanges, as well as the less commonly used one such as, for example, whale activity and inflows and outflows to centralized exchanges.

Originating in the traditional stock and financial markets, many technical indicators have also shown their worth in the crypto space. Being able to track these indicators on a single platform in real-time gives the average trader the same level of access to information that a market insider would have.

Dash 2 Trade assembles these indicators into a unified whole in an attractive and easy-to-see graphical user interface; traders can then concentrate on accessing and applying a combination of their preferred indicators to inform their trading decision-making.

**Key features:**
- Moving averages
- Identifying support and resistance levels
- Correlation of price movements between coins and assets
- Orderbook statistics

**Bespoke Scoring System for Presales and ICOs**

Presales offer some of the most interesting and profitable opportunities in the crypto space. When analyzing a presale token, the attributes and factors to be considered will differ in some important regards, mainly related to the fact that price discovery is yet to take place.
Dash to Trade is the first of its kind

In the first of its kind in crypto, the Dash 2 Trade dashboard will provide researched and reliable information and metrics to help all traders assess the team bona fides and overall legitimacy of presale tokens.

The Dash 2 Trade team will, among other things, conduct manual scoring of projects to assess key metrics that cannot be evaluated by automated software systems.

The scoring system takes into account crucial metrics, such as the credentials of the team behind the project, whether the contract has been adequately audited and the tokenomics of the project.

The Dash Score scoring system is based on five main categories, and every category has its own weight – the maximum total a project can score is 100.
Category parameters are evaluated with a score 0, 1, 2 or 3, where 0 is assigned when there is no information about a parameter, and 3 is the maximum score.

To achieve a 100 Dash Score a project must score 3 on every category parameter.

**Key features:**

- Overview of presale tokens to provide insight for individual projects.
- A ‘Dash Score’ assesses the general quality of a presale token along with fundamental metrics to measure the credibility of a project.

**Strategy Builder and Backtester**

The Dash 2 Trade crypto intelligence platform actively encourages independent trading strategies. Holders of the D2T token are able to access the innovative strategy builder. Here, traders of all skillsets can create their own crypto trading strategies based on Dash 2 Trade metrics.

Before risking any capital, D2T holders can utilize the Dash 2 Trade backtesting features. This mirrors live market conditions across all data points, inclusive of volume, volatility, and order book activity from the most prominent exchanges.

Backtesting allows D2T holders to assess whether or not their identified strategy is profitable. If it isn’t, traders can re-evaluate the strategy and subsequently make suitable amendments to optimize it. The trader can revert back to the Dash 2 Trade backtesting platform at any time for further analysis.

In addition to assessing how a given strategy will perform in the market, Dash 2 Trade provides a risk metric for traders to use to further appraise their strategy.

The knowledge and expertise of our trading and quant veterans of crypto and and other financial markets has been applied to develop a strategy builder tool that makes backtesting accessible to D2T token holders at all levels of experience.
Auto Trading API

Dash 2 Trade’s auto-trader allows users to set up automated trading strategies based on key metrics and order types. Once created, the strategies can be plugged directly into their broker’s API.

For example, it would allow a trader to configure the following strategy: "IF [metric ABC] of [BTC] to reach value [X], then place a [BUY/SELL] [market_order] for [$1000] [BTC]."

In essence, we are allowing custom orders that users can set up to link Dash 2 Trade’s metrics with trading strategies. As part of the system, an automatic review of the performance of the auto-trader will be added.

For example, in the event that a trader has a fixed stop loss position on a trade, Dash 2 Trade would provide a hypothetical revenue comparison of setting the stop-loss at a different price point (assuming the trade is not so large that it would impact on the market price).

Traders can, if they wish, run a hypothetical strategy in parallel with their active strategy to study the comparative performance of each.

Risk Profiler

Alongside providing insights and tools, Dash 2 Trade’s mission includes helping retail traders to manage risk more effectively. For example, hedging a long position (buy) by opening a short (sell) position, where the trader profits from falls in the price of an asset, is a trading strategy that is generally underutilized by retail traders.

Creating awareness of shorting strategies or other risk control measures such as how to minimize risk when using leverage by trading on margin, Dash 2 Trade will introduce traders to the psychology behind making good trading decisions in all market conditions.

Establishing a trader’s risk profile requires evaluating what their risk appetite is and, specifically, how much risk they are willing to take to meet their financial goals.
Dash 2 Trade asks each user a set of questions, the answers to which are used to determine an individual trader’s risk profile. A trader’s tolerance of risk can be affected by factors such as age and net wealth.

But it can also include things such as sensitivity to certain colors – studies have shown that westerners looking at a red line on a price chart will interpret it more negatively than if it were colored green. In China, where red is used for rising prices and green for falling prices, the reverse has been found to be the case.

Dash 2 Trade takes all of these various inputs into account in determining risk profile, to provide the basis for recommendations on the most appropriate trading strategy for an individual. With this framework, for example, we can recommend whether a trader is suited to day trade or whether a trader is sensitive to seeing charts in a certain color to make decisions.

Risk profile helps to calibrate the likely risk-reward ratio an individual trader is willing to accept. Put another way, risk-reward is a capital protection mechanism that measures the risk of loss. Dash 2 Trade provides a risk-reward ratio for each trade and whether it aligns with the risk profile of a particular trader.

Risk profiles provide Dash 2 Trade with a framework to constantly engage with traders to improve their decision making, taking into account factors such as the dangers of cognitive bias that can influence an individual’s trading decisions and how mass psychology can play out at the market level.

**On-chain Analytics**

Dash 2 Trade features on-chain data for token and wallet activity, allowing D2T holders to monitor, among other things, whale movements and market-maker dynamics across multiple blockchains.

The core objective when performing on-chain analysis is to interrogate leading networks – such as Bitcoin, Ethereum, Binance Smart Chain and Solana – around the clock to identify
specific trends. These four networks alone account for the vast majority of on-chain activity in the crypto space.

Critically, Dash 2 Trade software has the capacity to flag unusual token movements. This could, for example, detect an unusually large movement of Sihba Inu (SHIB) tokens from a non-exchange wallet onto an exchange. In this scenario, the movement would, in real-time, be flagged up on the Dash 2 Trade analytics dashboard as a potential incoming sell order.

**New Crypto Listing Alerts**

New exchange listing announcements can result in significant price changes for a token. The reason for this is because the listing, especially for listings on larger exchanges, will often result in increased trading volume.

Listings on tier-one exchanges such as Binance, Coinbase and Gate.io are highly likely to impact a token’s price.

For D2T subscribers, immediate access is provided to new crypto listings that the Dash 2 Trade platform identifies. Upcoming listings are also identified. Listing alerts D2T holders the timely information they need to set up positions to profit from the expected price volatility.

**Social Trading**

Dash 2 Trade will host a number of social trading features for D2T token holders.

Users’ performance will be tracked so that it is easy to find the most consistently performing community members to follow. In future versions traders will be able to set up auto-copying of the trades of other users.

Dash 2 Trade trading competitions will feature a weekly prediction challenge. Insights from the predictions made will be available to D2T users and the winner of the competition receives a reward paid in D2T tokens. Reward amounts dollar values will range from $100 to $100k.
Trader AMAs [ask me anything] allow the community to engage with traders with a diverse set of experiences and backgrounds. These sessions could be a catalyst for a new approach to the market or insight in the trading psychology.

Shareable signals and strategies are something that users will be able to generate and share in the community.
2. D2T Token, ecosystem and subscription benefits

Tokenomics Explanation

The Dash 2 Trade analytics dashboard operates on top of the Ethereum blockchain. The native digital asset of the project is the D2T token, which complies with the ERC-20 standard. D2T is a utility token that offers its holders a range of benefits, such as access to the Dash 2 Trade dashboard and all of the features previously discussed.

The total supply of D2T is 1 billion tokens. This represents the total fixed supply, so no additional tokens will be created. The smart contract is designed to prevent the minting of additional tokens. The D2T token is used to pay subscriptions to access the dashboard and all its features. As we progress along the roadmap, more Dash 2 Trade features will be linked with D2T.

Dash 2 Trade believes that it is the business fundamentals of the platform that determines the value of the D2T token and not the activity of traders per se. The more users there are of the system, the more valuable the token will become.

Because Dash 2 Trade wants to encourage onboarding, and therefore the purchase of the D2T token to take out subscriptions, there is no tax imposed on token transactions — D2T will always be taxless.

Token Attributes

- 1 Billion token total
- ERC-20 Token
- Fixed Supply
- No buy/sell tax
Token Utility

Dashboard Access Tiers

D2T tokens are required to pay for subscriptions to access the system. There will be a free tier for users to explore the Dash 2 Trade platform, but the full feature set will be locked and only accessible to subscribers.

Subscription pricing is as follows:

- 400 D2T per month for the starter tier
- 1,000 D2T per month for the professional tier

A full list of features that can be accessed when Dash 2 Trade launches can be viewed in our membership table.

Trading Competitions & Social Trading

Participation in trading competitions and rewards in the D2T ecosystem will require the D2T token.

Users can create their own strategies and make them available on Dash 2 Trade from phase 5 onwards in our roadmap. Sharing these strategies can be linked to a D2T reward if a certain threshold users adopt the strategy.

Advanced Tooling

As features on the roadmap are further developed, more advanced tools such as running backtests using the strategy builder tool will also require D2T tokens. These strategy analysers, especially when run across many different blockchains and tokens can be computationally intensive. Users only pay for what they use.
## Token Distribution

<table>
<thead>
<tr>
<th>Description</th>

</tr>
</tbody>
</table>

The majority of the supply is allocated to the public presale.

## Subscription Structure

Dash 2 Trade has three membership tiers, paid for with D2T tokens. The price of subscriptions in D2T is benchmarked to 400 D2T and 1,000 D2T for the starter and premium tier, respectively.
**Free Tier**

The free tier does not require the user to hold any D2T tokens. This will, however, greatly reduce the number of features that the user has access to. On the free tier, the user will have unfettered access to the Dash 2 Trade market data terminal, which offers tier-one pricing information that all traders should be using.

While the free tier does offer access to market/social metrics, in addition to notable presale token launches, this will only be for selected tokens. Those on the free tier will not have access to automated trading tools, the strategy builder backtesting platform, or watchlists.

Ultimately, the purpose of the free tier is to provide interested traders with the opportunity to discover what the Dash 2 Trade analytics dashboard has to offer. However, to fully capitalize on the professional-grade services provided by Dash 2 Trade, a monthly subscription will need to be purchased.

---

**Starter Tier**

The starter tier comes with a monthly subscription price of 400 D2T tokens. It offers access to advanced on-chain data and basic intelligence on notable presale launches.

Watchlists are limited to two tokens, and access to a selection of market indicators and social metrics is provided.

The starter tier also offers access to automated trading tools, alongside the strategy builder backtesting platform. There is also a members-only Discord channel for users to discuss metrics and insights.
**Premium Tier**

The premium tier offers full access to all Dash 2 Trade features. This includes access to quarterly trading competitions, where prizes are funded from the 5% of subscription fees revenue that is allocated to the prize pool.

Premium-tier members also have access to on-chain data, whale wallet alerts, and professional-grade market indicators. Social metrics come in the form of market-leading data feeds in real-time.

Moreover, premium subscribers have access to Dash2 Trade’s comprehensive coverage and analysis of crypto presales and the target recommendations.

Live event streams take things to the next level on the premium tier, offering unrivaled access to Dash 2 Trade’s proprietary crypto trading insights and scoring system.

The premium tier is the ultimate toolset to enable traders to meet their return on investment goals by facilitating consistent outperformance in the crypto market through the tier’s provision of a plethora of actionable insights.

The premium tier is priced at 1,000 DT2 tokens per month. A 20% discount is available to those that commit to an annual purchase of 9,600 D2T tokens.

The Dash 2 Trade Ecosystem

Community-Centric: Dash 2 Trade believes that community is the key to success, especially in the Web3 space. The happier and more successful a project community is, the more likely the members are to spread the word and help Dash 2 Trade to scale new heights.

With encouraging community engagement and loyalty uppermost in mind, Dash 2 Trade’s dedicated Discord group is an open forum for token discussions and all aspects of trading. Dash 2 Trade also aims to protect and grow the community through regular engagement initiatives and knowledge-sharing to help all community members succeed and thrive in the crypto space.

Transparency: At the heart of Web3 is community, collaboration and transparency. One of the core differences between crypto and traditional finance is the availability of real-time open-source information. Dash 2 Trade highly values integrity and openness and it is this that guides our transparent information sharing. Dash 2 Trade will provide constant updates on social media, with all D2T transactions available on the blockchain in real time.

Scalable: Dash 2 Trade will grow with the crypto market, but is also has its own internally driven growth vectors. As soon as the protocol launches, data is collected in real-time and stored. Through the application of Big Data analytical tools and AI technologies such as machine learning and natural language processing, important data points and patterns can be identified.

It is this analyzed data that provides the raw material from which market insights can be continuously discovered and disseminated. And the more data that our system consumes, the more powerful and intelligent it becomes. Dash 2 Trade will deliver richer and more accurate technical and other forms of analysis as the platform grows and scales.

Risk conscious: Every trade and market has some sort of risk-to-reward trade-off to be made, related to risk profile, trading style and psychology. Understanding and managing trading risk is an important theme of the Dash 2 Trade platform.
3. Total addressable market size and competition

Unlike other crypto sectors, such as DeFi, privacy coins, storage, meme coins – coins based on general trading have universal appeal right across the crypto space because, after all, we all want to make successful trades.

Not surprisingly, therefore, some of the most stable and best-performing coins are the native tokens issued by crypto exchanges, in a trend started by Binance.

**Dash 2 Trade’s TAM**

More widely, crypto trading is a huge market, with Binance alone generating revenue of $20 billion in 2021, according to Bloomberg, with a valuation possibly 10x that.

With a total addressable market (TAM) that large, education, tools and metrics to help investors and traders have proliferated.

Although exchanges include some of these tools and educational materials, traders need to turn to third-party products to find the best-of-class offerings, of which Dash 2 Trade will soon be one.

**Dash 2 Trade’s competitors**

Active user numbers are hard to come by and verify, but one of the current market leaders, Cryptohopper, claims to have 500,000 users of its service, which provides trading bots, backtesting and other services.

Others such as Glassnode concentrate on-chain data and workbenches to, for instance, build your own metric formulas to find market-beating opportunities.

And there are yet other products that do one thing quite well, such as Lunarcrush which concentrates on social sentiment analysis.
Dash 2 Trade takes a unified approach

But Dash 2 Trade has the great advantage of unifying the most useful value-added products found, in part, on the various competing platforms and putting it all together in an impressive, convenient and powerful dashboard.

Equally important is the fact that Dash 2 Trade offers many features that competing platforms don’t.

Dash 2 Trade solves the presale blindspot problem.

Chief among those features is Dash 2 Trade’s focus on intelligence on presale tokens, where much of the alpha generation in the market is to be found, but is an area neglected by all other trading platforms.

Below we have drawn up a competition matrix so you can see for yourself at a glance just how well Dash 2 Trade compares against the competition.

4. Roadmap

The foundations have been laid and the Dash 2 Trade team is already hard at work building the D2T platform and ecosystem.

Dash 2 Trade is building the trading experience of the future today and the team’s proven capabilities means investors, and later the users, can have confidence in the successful achievement of the product development milestones set out below.

In the roadmap for the first major iteration of the D2T ecosystem, the main tools and features are laid out. The development milestones outlined is an accurate estimation of scope, though the project may adjust priorities based on user feedback.

---

**Phase 1**

**Launch**

Phase 1 puts in place the foundations of the Dash 2 Trade ecosystem. At the center of this phase is the development of the Dash 2 Trade analytics dashboard.

A full-time development team of eight highly experienced engineers is already hard at work creating the Dash 2 Trade ecosystem using the latest tools and technologies.

The main tech-stacks are python and next.js. Amazon Web Services (AWS) is being used to host many of the backend systems and handle our real-time data streams.

[Project] Create founding team and governance  
[Dev] Development kick-off  
[Project] Trader partnerships  
[Token] Presale launch of D2T token  
[Token] Full Security Audit
Phase 2

Launch

Phase 2 of the roadmap will see Dash 2 Trade begin beta testing launch. Members of the D2T community – in addition to notable stakeholders from within the broader crypto industry – will be invited to test-drive the Dash 2 Trade dashboard.

The overarching objective here is to collect valuable feedback from users of the dashboard to assess which, if any, core improvements need to be made.

The beta launch will remain in place until the Dash 2 Trade analytics dashboard achieves its subscription-ready state.

[Dev] **Dashboard Launch and Beta Testing** – Launch of the dashboard and start of subscriptions, giving users access to:

- Social metrics data
- Technical indicators
- Presale insights and scoring
- Real-time event streams
- Customizable Watchlists
- News feeds
- New listing announcements

[Token] DEX Listing and CEX Listing Drive

---

Phase 3

Backtester *(Strategy Builder Tool)*
Phase 3 will see a big development push to build out many of the additional Dash 2 Trade features in the analytics dashboard.

This is inclusive of the strategy builder and backtesting tools, in addition to the inaugural Dash 2 Trade competition.

The platform will also launch its AMA (Ask Me Anything) ecosystem. This offers D2T holders the opportunity to tap into the thought processes of experienced crypto traders and stakeholders.

[Dev] **Backtester**

[Dev] **Risk Profiler**

[Dev] **Trading competition launch**

[Project] **Trader AMA’s**

[Project] CEX partnerships and integrations

---

**Phase 4**

**Auto-trader**

Phase 4 will see the launch of a much-anticipated Dash 2 Trade feature – auto trading. The auto-trader will enable starter and premium subscribers to buy and sell crypto assets in an autonomous manner.

The auto-trading software can be programmed to incorporate Dash 2 Trade signals and connect to a user’s preferred exchange via its API.
With Phase 3 having initiated the launch of the backtesting facility, the launch of the auto-trader will enable D2T holders to test-drive their trading strategy in live market conditions without risking any capital.

Phase 5
Wisdom of Crowds

In Phase 5 the Dash 2 Trade platform’s social trading features will be launched. This will give D2T holders the ability to share market insights and trading strategies with the Dash 2 Trade community. Users will be able to follow other traders on the platform.

Furthermore, additional charting tools will be released, making it easier for users to compare metrics and strategies.

Dash 2 Trade will also be asking the community to identify the features deemed to be most valuable, and this feedback will inform subsequent development work.

Co-Founded by Veterans from Learn 2 Trade

Learn 2 Trade is an established trading signals brand with over 70,000 members worldwide. Over the course of three years, and under the mentorship of top traders in the industry, Learn 2 Trade has helped a large number of people to succeed at trading through the use of its education resources and trading signals.

The same successful team behind Learn 2 Trade has joined forces with other profitable traders, quants and AI developers to deliver a crypto intelligence dashboard and ecosystem that can deliver trading success for retail traders.

With this bedrock of expertise, the experience of building up a large existing customer base, and a track-record of generating profitable returns for its members, it means the Dash 2 Trade team is confident that the business model described here will be successfully executed.

Dash 2 Trade’s aim is to construct a sustainable and trustworthy center for trading secured on a Web3 foundation.

Dash 2 trade is built by traders for traders. It is delivering professional institutional-grade yet easy-to-use analytical tools, presented in a dashboard interface, to create a one-stop turn-key solution providing the specialized intelligence to enable retail investors to consistently outperform the market, and in the process to change forever the crypto trading space.
Risk Statement

Understanding risk is an important consideration for protecting capital, so before deciding to purchase the D2T token prospective holders should carefully weigh their risk appetite.

Purchasing D2T tokens entails a degree of risk and may lead to the loss of a considerable or the whole of the capital advanced, as delimited by the amount of purchased D2T tokens. Before purchasing, prospective holders should carefully consider the risks identified in this whitepaper, as well as any other risks not anticipated or included in this document.

The regulatory status of crypto assets may vary depending on your jurisdiction. It may be possible that future laws, regulation or policies relating to crypto assets may be implemented that affect token holders’ acquisition, rights, and ability to buy, sell, convert or use crypto assets such as the D2T token.

You should only purchase D2T tokens if you fully understand the tokenomics of the D2T token and the D2T ecosystem. Crypto assets are not regulated as financial instruments and there is no refund or compensation available from corresponding regulatory bodies.

Crypto assets can be the subject of expropriation or theft. There may be no remedy if there is a successful attack by malicious actors against the Ethereum Chain on which the D2T token is built. Additionally, hackers may attempt to interfere with the D2T platform directly in a number of different ways such as malware attacks, distributed denial of service attacks and consensus-based exploits. These attacks could lead to a loss of D2T tokens or the loss of the ability to access D2T tokens.

Readers should consider consulting professionals such as an independent financial adviser, a tax consultant, accountant or a lawyer in order to fully satisfy themselves regarding any outstanding matter related to the purchase of the D2T token.
